

Data: The 58 "Elite Broodmares" and their records:

For "Elite Broodmares," see

http://asvt.se.space2u.com/asvtweb/faktabank/elit_diplomston/Elitston_2012.pdf

For production of offspring, see

<https://www.travsport.se/hast/visa/188644/avkommor>

Additional data:

www.thebloodbank.info

*Notes on method, design, data:

First, the very awarding of the status "Elite Broodmare" is an unqualified human intervention, not from "the horses' mouths," so to say. This means that the data do not qualify as a sample for generalization for the breed at large, not even for the broodmare population in Sweden. The validity of the data is by any standard excellent, as recorded by Svensk Travsport and ultimately audited by the several parties concerned. As for method, the design relies on tabulation of discrete rather than continuous variables, crosstabulations instead of regression analysis. Using averages is normally a risky measure in bloodstock analysis, here the excuse is that when averages are compared the method is less shaky. In a few tables and computations there may be discrepancies due to missing data, twin-births, offspring too young to be racing and horses reentering racing status. Earnings of dams not included as purses too varied across time and countries for meaningful comparisons.

NRS: No records of starts.

xx xx-xx-xx: Starts - 1st - 2nd - 3rd.

Earnings in SEK, K=thousand, M=million.

Full sister: red

Full brother: blue
